                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps
                                                                                                                                              The peptide is prepd. by cyclisation of the synthetic peptide. The Trp residue at posn. 3 may be side chain protected with a lower alkanoyl gp; the Glu residue at posn. 4 may be protected with an al (lower) alkyl gp. An analogous natural peptide, WS 7338, may be isolated from cultures of Streptomyces sp. no. 7338.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     .

They may be used in the treatment of cardiac disease, acute renal insufficiency or asthma.
                                                                                                                                                                                                                                                                                                                                                  Novel cyclic peptide(s) used as endothelin receptor antagonists for treating cardiac diseases, e.g. myocardial infarction, acute renal insufficiency or asthma
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           .

They strongly inhibit the vasoconstrictive action of endothelin. They are useful as drugs for improving circulatory function in mammals, in treatment of myocardial infarction, acute renal dysfunction or asthma. Thesse peptides may be prepared by conventional methods of solid or aqueous phase synthesis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Cyclic; endothelin; inhibitor; vasoconstriction; drug; circulation; mammal; myocardial infarction; renal dysfunction; asthma.

                                                                                                                                                                                                                                                                                                                                                                                       The sequences given in AAR35418-28 are cyclic peptides which act as endothelin inhibitors. They strongly inhibit the vasoconstrictive action of endothelin. They are useful as drugs for improving circulatory function in mammals, in treatment of myocardial infarction, acute renal dysfunction or asthma. Thesse peptides may be prepared by conventional methods of solid or aqueous phase

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The sequences given in AAR35418-28 are cyclic peptides which act as endothelin inhibitors. They strongly inhibit the vasoconstrictive action of endothelin. They are useful as drugs for improving circulatory function in mammals, in treatment of myocardial infarction, acute renal dysfunction or asthma. Thesse peptides may be prepared by conventional methods of solid or aqueous phase synthesis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Cyclic; endothelin; inhibitor; vasoconstriction; drug; circulation; mammal; myocardial infarction; renal dysfunction; asthma.

                                                                                                                                                                                          The sequences given in AAR35418-28 are cyclic peptides which act as endothelin inhibitors. They strongly inhibit the vasoconstrictive action of endothelin. They are useful as drugs for improving circulatory function in mammals, in treatment of myocardial infarction, acute renal dysfunction or asthma. Thesse peptides may be prepared by conventional methods of solid or aqueous phase
                                                                                                                                                                                                                                                                                                                                                                                                                                        Cyclic; endothelin; inhibitor; vasoconstriction; drug; circulation; mammal; myocardial infarction; renal dysfunction; asthma.

                                                                                                                                                                                                                                                                                                            The sequences given in AAR35418-28 are cyclic peptides which act as endothelin inhibitors. They strongly inhibit the vasoconstrictive action of endothelin. They are useful as drugs for improving circulatory function in mammals, in treatment of myocardial infarction, acute renal dysfunction or asthma. Thesse peptides may be prepared by conventional methods of solid or aqueous phase synthesis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Cyclic; endothelin; inhibitor; vasoconstriction; drug; circulation; mammal; myocardial infarction; renal dysfunction; asthma.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New cyclic penta:peptide derivs. contg. one L-aminoacid - inhibit endothelin receptor activity, vasoconstriction etc., useful for treating myocardial infarction, acute renal dysfunction and

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The sequences given in AAR35418-28 are cyclic peptides which act as endothelin inhibitors. They strongly inhibit the vasconstrictive action of endothelin. They ere useful as drugs for improving circulatory function in mammals, in treatment of myocardial infarction, acute renal dysfunction or asthma. Thesse peptides may be prepared by conventional methods of solid or aqueous phase synthesis.

They strongly inhibit the vasoconstrictive action of endothelin. They are useful as drugs for improving circulatory function in mammals, in treatment of myocardial infarction, acute renal dysfunction or asthma. Thesse peptides may be prepared by conventional methods of solid or aqueous phase
                                                                                                                                                                                                                                                                                                                                               Cyclic, endothelin; inhibitor; vasoconstriction; drug; circulation; mammal; myocardial infarction; renal dysfunction; asthma.

                                                                                                                                                                                                                                                                                                                                                   The sequences given in AAR35418-28 are cyclic peptides which act as endothelin inhibitors. They strongly inhibit the vasoconstrictive action of endothelin. They are useful as drugs for improving circulatory function in mammals, in treatment of myocardial infarction, acute renal dysfunction or asthma. Thesse peptides may be prepared by conventional methods of solid or aqueous phase

This invention describes novel complexes of compounds which have the formula B-L-(K)b with metal ions of atomic number 21-32, 37-39, 42-51 and 57-83 where E = residue of an endothelin (or its derivative, partial sequence, analogue or antagonist), including forms with free SH groups that bind directly to metal, optionally labelled with radioactive iodine isotopes, L = bond, Z1-R-Z2 or a group (i), R = 1-20. Optionally constituted by 10 and/or epoxy, and coptionally interrupted by 1 or more 0, S, CO, NCO or NH (the last 2 optionally interrupted by 1 or more 0, S, CO, NCO or NH (the last 2 optionally nubstituted by 1-6C alkyl), Z1 and Z = 0, S, COO, NH, CS, NH, NCO, CSO, NH, NHO or NHCS, s and t = 0-3, B = phenyl or cyclohexyl ring, b = 0 or 1, K is a chetating residue. The compounds of the invention are useful as diagnostic agents, including contrast agents for X-ray and NMR imaging of pathological vascular changes e.g.

CX ray and NMR imaging of pathological vascular changes before these become standiopharmaceuticals. The invention allows the marking of possible early non-invasive diagnostic agents they have better pharmacokinetic properties and provide improved contrast. They have better pharmacokinetic properties and provide improved contrast. They have better pharmacokinetic properties and provide improved contrast. They have excellent in vitro and in vivo stability of sequence is a specific claimed example of a beptide used in the construction of the metalcomplex-conjugates of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            New complexes of derivatised endothelin or related cpds. - with radioactive or paramagnetic metal ions, useful as diagnostic agents for imaging pathological changes in blood vessels

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The peptide inhibits binding of endothelin-1 (ET) to ETA receptors and/or to ETB receptors. It can be used for detecting, distinguishing and isolating ET receptor subtypes. The peptides also act as ET antagonists and can be used to treat endothelinmediated disorders such as hypertension, pulmonary hypertension, cardiovascular disease, bronchoconstriction, asthma, inflammatory diseases, ophthalmolgic shock, anaphylactic shock, haemorrhagic menstrual disorders, obstretic conditions, erythropoietin-mediated vasoconstriction and wounds.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                New cyclic peptide(s) which modulate endothelin activity - used for treating endothelin-mediated disorders such as cardiovascular
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ..

The peptide is highly conserved in all known HIV strains. Peptides containing the SLWDQ sequence elicit a very strong immune response (both humoral and cellular) in subjects infected by HIV-1, i.e. an autoimmune reaction. Also, oligopeptides containing SLWDQ can inhibit T cell activation, probably by competition with the CD4-CMH2 interaction. Antibodies directed against the peptide or against multimers of the peptide can be therapeutically used to suppress the immune response in cases of HIV-1 infection.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           New peptide(s) inducing an auto immune response in HIV infected subjects - also the multimer, proteins contg. them and derived antibodies, for treating or preventing HIV infection and for

CENP-B protein; centromere protein; epitope; autoantibody; immunoinfective cluster virus; nuclear protein antigen; systemic rheumatic disorder; SRV-1 viral protease; systemic lupus erythematosus; scleroderma.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       A comparison of the CENP-B centromere protein sequence with proteins from immunoinfective cluster viruses revealed widespread homologies. The importance of these homologies motifs is that they are epitopes for autoantibodies occurring in high titres in systemic rheumatic disorders. Sera from such patients could be used for treatment of immunoinfective cluster virus infections, e.g. HIV-1, immunoinfective adenoviruses, human lymphotropic retroviruses,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps
                                                       CENP-B protein residues 191-195, homologous to SRV-1 protease motif.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Methods for treating immunoinfective cluster virus infections -
utilise antibodies or fragments characteristic of auto antibodies

New cyclic pentapeptides are disclosed which have a gamma-turn and a beta-turn and which are of formula Cyclo(-Al-A2-A3-A4-A5-) where the amino acids in positions 1-2-3 form a gamma-turn and the amino acids in positions 3-4-5-1 form a beta-turn in combination with the gamma-turn. Bither D-amino acid residues are chosen for Al, A3 and A5 and L-amino acids for A2 and A4; or L-amino acid residues are chosen for A1, A3 and A5 and D-residues for A2 and A5. The peptides are chosen for antagonists against the NKZ receptor or endothalin receptor. They can be used as antisathmatic, antiinflammatory or antiarthritic can be used as assay or affinity purification reagents for the
                                                                                                                                                                                                                                                                                                                                    New cyclic penta:peptide(s) having a gamma-turn and a beta-turn - used as NK2 receptor antagonists for treating asthma,
                                                                                /note= "D-Trp; and this amino acid is condensed
onto the N-terminal to form a cyclic
peptide"
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present sequence is a specifically claimed example of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Beta-turn; gamma-turn; NK2; neurokinin; endothelin; receptor;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 65.2%; Score 15; DB 15; Length 5; 100.0%; Pred. The chalcogen-containing compounds are ligands which are complexed with a technetium or rhenium radioisotope. The iligand-peptide conjugates are useful for non-invasive, in vivo imaging, e.g. of receptors.
                                                                                                                                                                                                                                                                                                                                                                              Bis-(N-(mercapto-ethyl- or -propyl) amino:carbonyl:methyl) oxide, sulphide or selenide and derivs. - are ligands for radioactive technetium or rhenium for diagnosis and therapy, e.g. for

beta-furn and which are of formula Cyclo(-A1-A2-A3-A4-A5-) where the amino acids in positions 1-2-3 form a gamma-turn and the amino acids in positions 3-4-5-1 form a beta-turn in combination with the gamma-turn. Bither D-amino acid residues are chosen for A1, A3 and A5 and L-amino acids for A2 and A4; or L-amino acid residues are chosen for A1, A3 and A5 and D-residues for A2 and A5. The peptides are antagonists against the NK2 receptor or endothelin receptor. They can be used as antiasthmatic, antiinflammatory or antiatthritic agents or as assay or affinity purification reagents for the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New cyclic pentapeptides are disclosed which have a gamma-turn and a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New cyclic penta:peptide(s) having a gamma-turn and a beta-turn
used as NK2 receptor antagonists for treating asthma,
inflammation or arthritis
/note= "D-Glu; and this amino acid is part of a
cyclic structure formed by condensation
with the C-terminal amino acid"
                                                                                                                                                                                                0;

                                                                                                                                                                                                                                                                                                                        New cyclic pentapeptides are disclosed which have a gamma-turn and a beta-turn and which are of formula Cyclo(-Al-A2-A3-A4-A5-) where the amino acids in positions 1-2-3 form a gamma-turn and the amino acids in positions 3-4-5-1 form a beta-turn in combination with the gamma-turn. Bither D-amino acid residues are chosen for Al, A3 and A5 and L-amino acids for A2 and A4; or L-amino acid residues are chosen for Al, A3 and A5 and antagonists against the NKZ receptor or endothelin receptor. They can be used as antiasthmatic, antiinflammatory or antiarthritic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Gaps
                                                                                                                                                                                                                                                                New cyclic penta:peptide(s) having a gamma-turn and a beta-turn used as NK2 receptor antagonists for treating asthma,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Endothelin cyclic peptide conjugated to chalcogen-contg. ligand.
                  /note= "D-Asp; and this amino acid is part of a
cyclic structure formed by condensation
with the C-terminal amino acid"

The chalcogen-containing compounds are ligands which are complexed with a technetium or rhenium radioisotope. The ligand-peptide conjugates are useful for non-invasive, in vivo imaging, e.g. of receptors or of

The sequences given in AAR73170-83 represent peptide ligands which are used with the radioactive peptide complex of the invention. The complexes may be used to image receptors, specifically of steroid hormones, receptor contg. issue and/or atherosclerotic plaque. These peptides allow the complex to be targetted to a specific tissue. These peptides are pref. derived from endothelin, and represent analogues, derivatives or antagonists.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      5
/note= "optionally has a carboxyl, amido, hydrophobic or macromolecular carrier gp. attached"
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 "optionally has an amino, acetyl, 9-fluorenylmethoxy-carbonyl, hydrophobic or macromolecular carrier gp. attached"
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            .

                                                                                                                                                                                                                                                                                                                                                                                                                      truncated at the amino terminus. DP-178 corresponds to amino acids 638 to 673 of the HTV-1 isolate LAI transmembrane protein 1994. It ectodomain, and complexes with DP-107 (corresponds to amino acids 558-595) which contains a leucine zipper motifi The peptides complex activity. The peptide derivs. were identified by a computer assisted peptide sequence search. The peptides inhibit transmission to uninfected cells, and can also be used as type and/or subtype specific diagnostic tools.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps
                                                                                                                                                                                                                                                                                                                                                                                                       AAR64365-97 are peptide derivs. of DP-178 (AAR64364) which have been

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           /note= "forms peptide bond with Leu at position 1"
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         AAR59459-R59461 are cyclic pentapeptides which inhibit melanin pigmentation. As part of a skin whitening cosmetic they can be used for the prevention of fleck formation after sunburn.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention relates to the new use of known endothelin receptor antagonists for prophylaxis and/or therapy of hypofunction of organs (particularly the liver) which occurs following their surgery or transplant. The present sequence is a specific example of a suitable antagonist listed in the Claims.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Endothelin receptor antagonist, organ hypofunction, liver, surgery, transplant, cyclic.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Cyclic endothelin receptor peptide for treating organ hypofunction.
                                                                                                                                  Endothelin receptor antagonist; organ hypofunction; liver; surgery;
                                                                                       Cyclic endothelin receptor peptide for treating organ hypofunction.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Use of endothelin receptor antagonists - for prophylaxis or treatment of organ hypofunction, partic. caused by surgery on or transplant of the organ

The invention relates to the new use of known endothelin receptor antagonists for prophylaxis and/or therapy of hypofunction of organs (particularly the liver) which occurs following their surgery or transplant. The present sequence is a specific example of a suitable antagonist listed in the Claims.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Endothelin receptor antagonist; organ hypofunction; liver; surgery; transplant; cyclic.
                        /note= "D-Trp, which is part of a cyclic peptide formed by condensation with D-Asp(1)"
                                                                                                                                                                                                                                        Use of endothelin receptor antagonists - for prophylaxis or treatment of organ hypofunction, partic. caused by surgery on transplant of the organ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Endothelin antagonist peptide for treating organ hypofunction.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention relates to the new use of known endothelin receptor antagonists for prophylaxis and/or therapy of hypofunction of organs (particularly the liver) which occurs following their surgery or transplant. The present sequence is a specific example of a suitable antagonist listed in the Claims.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Endothelin receptor antagonist; organ hypofunction; liver; surgery;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Cyclic endothelin receptor peptide for treating organ hypofunction.
                                                                                                       /note= "D-Thg(2) or D-Cpg, where Thg(2) is 2-(2-thienyl)glycine and Cpg is 2-cyclopentyl-glycine"

New peptides of formula R1-X-R2 are provided, together with their conjugates with peptides, proteins, biomolecules and macromolecules, their complexes with metal ions and their water-soluble salts; where their complexes with metal ions and their water-soluble salts; where including at least one Met, Arg, Lys or Asn but no Cys; R1 is H or a hydrocarbyloxy or an optionally substituted amine group (forming an hydrocarbyloxy or an optionally substituted amine group (forming an metal (e.g. 99m-T0) for in-vivo diagnostic imaging and therapy of tumours, organs and foci of inflammation. Conjugates of the peptides can be targetted to specific itssues. A particular application is imaging of the prosclerotic plaque. Metal is bound with good in-vivo stability; unbound material is rapidly cleared; and there is no allergic reaction. Specific examples of the peptides are paptides are free of Cys, they can be prepared simply and rapidly and can be presented in the form of a kit for radioparameterial is rapidly. Specific examples of the peptides are given in ARR8444 - ARR84439.

The present sequence is a specific example of an endothelin peptide which can be used as a conjugate with the new peptides.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                sex-hormone, human; veterinary medicine; cancer; prostate; uterus; breast; pituitary; prostatomegaly; endometriosis; hysteromyoma; precocious puberty; amenorrhoea; premenstrual syndrome; oylic; multilocular ovarian syndrome; comedo; pregnancy; contraception; ovulation; menstrual cycle; cestrus; meat quality; growth; spawning; fish; testosterone; superagonist; leuprorelin acetate.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Peptide mimetic; endothelial leukocyte adhesion molecule; ELAM; selectin; receptor; leukocyte; vascular wall; endothelium; extravasation; inflammation; sialyl Lewis; cell surface glycoprotein; HL60 cell.
                                                                                                                                                                                                                                      intentialing hormone releasing hormone (LHT.RH) receptor antagonist composition of the invention. Peptides such as this are used to prevent or treat sex-hormone dependent disorders in human or veterinary medicine, esp. cancers (of the prostate, uterus, breast or pituitary), prostatomegaly, endometriosis, hysteromyoma or precocious puberty, but also amenorrhoes, premenstrual syndrome, multilocular ovarian syndrome, comedo, etc.; also to control pregnancy (contraception for men or women, also to induce ovulation) and the menstrual cycle. They are also used growth, and to promote spawning in fish. They may also inhibit the translent increase in testosterone blood levels caused by admin. of superagonists such as leuprorelin acetate.

that bind to endothelial leukocyte adhesion molecule (BLAM)-1. This that bind to endothelial leukocyte adhesion molecule (BLAM)-1. This molecule is a member of the selectin family of receptors and is involved in binding of leukocytes to the vascular endothelial wall prior to extravasation of the leukocyte, e.g. to a site of inflammation.

The peptides bind pref to B-selectin but may also bind L- or P-selectin, and can be used to treat conditions mediated by E-selectin, e.g. inflammatory conditions. The peptides have strong affinity for the selectin receptors and inhibit the binding of the sialyl Lewis (SLE-x) car of cell surface glycoproteins to B-selectin. The peptide are small, generally less than 2 kD, have an IC50 of up to 100 micromole against binding of HL60 cells to BLAM-1, have one or more peptide linkages replaced by CH2OC(O)NR, phosphonate, CH2SOZNR, CH3ONR, CON(R6), con NHCONH linkages where R = H or a lower alkyl and R6 = a lower alkyl. The peptides may also have substituted N- and C-termini e.g. cucinimido, N-benzyloxycarbonyl or N-lower alkyl cpds.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Gaps

This peptide is an endothelin antagonist which is the active component in a new cerebral oedema inhibitor, used to prevent swelling in head injury, cerebral tumour, blood vessel damage in apoplexy, hypertension, respiratory failure, carbon monoxide poisoning, hyponatraemia, acute Kidney damage, hyperglycaemia, hypoglycaemia, adrenal function failure, collagen disease, inadequate buffering of blood, or poisoning by tin, lead or arsenic. The inhibitor prevents cerebral hernia, headache, nausea, dizziness, restlessness and loss of consciousness, especially sudden death from cerebral hernia.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Bifunctional sulphonamide; ligand; radioactive; technetium; rhenium; conjugate; endothelin; angiotensin; targetting agent; organ; in vivo imaging; receptor; tissue; atherosclerotic plaque; diagnosis; breast; prostatic; carcinoma; cytostatic agent;

                                                                                                                                                               Bifunctional sulphonamide type ligands for radioactive technetium or rhenium - and their chelates and conjugates, useful for imaging
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gaps
                                                                                                                                                                                                                                                                                                                                     technetium and rhenium, when conjugated to an endothelin or angiotensin derived targetting agent, e.g. the present peptide, can be used for the in vivo imaging of organs, receptors and receptor containing tissues and/or atherosclerotic plaques, e.g. for the diagnosis of breast or prostatic carcinoma. They can also be used for cytostatic agent delivery.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       rhenium, conjugate, endothelin, angiotensin, targetting agent, organ; in vivo imaging; receptor; tissue, atherosclerotic plaque; diagnosis; breast; prostatic; carcinoma; cytostatic agent;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ;

                                                                                                                    technetium and rhenium, when conjugated to an endothelin or angiotensin derived targetting agent, e.g. the present peptide, can be used for the in vivo imaging of organs, receptors and receptor containing tissues and/or atherosclerotic plaques, e.g. for the diagnosis of breast or prostatic carcinoma. They can also be used for cytostatic agent delivery.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Bifunctional sulphonamide type ligands for radioactive technetium and rhenium - and their chelates and conjugates with targetting agents, useful for imaging carcinoma, atherosclerotic plaque, etc.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New sulphide-sulphonamide bi:functional chelating agents - forming new, stable technetium or rhenium complexes and conjugates useful as radiodiagnostic and radio-therapeutic agents
          Novel bifunctional sulphonamide type ligands for radioactive technetium and rhenium, when conjugated to an endothelin or angiotensin derived targetting agent, e.g. the present peptide, can be used for the in vivo imaging of organs, receptors and receptor containing tissues and/or atherosolerotic plaques, e.g. for the diagnosis of breast or prostatic carcinoma. They can also be used
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          XSNS-type bifunctional sulphide containing sulphonamide chelating agents and their technetium or rhenium complexes, can form covalently bonded conjugates with substances selectively enriched in diseased tissue, e.g. the present peptide. The substance is an endothelin or angiotensin peptide, or a partial sequence, analogue, derivative or antagonist, or a chemotactic peptide. The conjugates are radiodiagnostic or radiotherapeutic agents, useful in the diagnosis of tumours, ischaemia or atherosclerotic
                                                                                                                                                                                                                                                                                                                                                                                                                                                   Conjugating cyclic peptide for radio-therapeutic/diagnostic agent.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Conjugate; diseased tissue; endothelin; angiotensin; chemotactic; radiodiagnostic; radiotherapeutic; diagnosis; tumour; ischaemia; atherosclerosis; vascular disorder; ischemia; circular; cyclic.
                                                                                                                                                                                                          .

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Peptide binding to low density lipoprotein - useful in removing LDL from body fluids and as carrier peptide(s) for drugs
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present low density lipoprotein (LDL) binding peptide can be used as an absorbent to remove LDL from body fluids, or as a LDL binding reagent. The peptide can be prepared easily and at low cost, and has excellent stability and preservability. It specifically binds LDL, and does not cause bradykinin production, white blood cell activation or blood agglutination.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              .

                                                                                                                                                                                                                                                                                      Peptide binding to low density lipoprotein - useful in removing LDL from body fluids and as carrier peptide(s) for drugs
                                                                                                                                                                                                                                                                                                                                    The present low density lipoprotein (LDL) binding peptide can be used as an absorbent to remove LDL from body fluids, or as a LDL binding reagent. The peptide can be prepared easily and at low cost, and has excellent stability and preservability. It specifically binds LDL, and does not cause bradykinin production, white blood cell activation or blood agglutination.
                                                                                                                                                                                                                                                                                                                                                                                                                                          ö

                                                                                                                                                                                                                                                                    Peptide binding to low density lipoprotein - useful in removing LDL from body fluids and as carrier peptide(s) for drugs
                                                                                                                                                                                                                                                                                                                                                                      The present low density lipoprotein (LDL) binding peptide can be used as an absorbent to remove LDL from body fluids, or as a LDL binding reagent. The peptide can be prepared easily and at low cost, and has excellent stability and preservability. It specifically binds LDL, and does not cause bradykinin production, white blood cell activation or blood agglutination.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              .;

proteins Tau and Big Tau, ubiquitin B, apolipoprotein E, microtubule associated protein 2 (MAP2), neurofilament-L, neurofilament-M, neurofilament-F, presentlin I, glala fibrillary acidic protein (GPAP), the cellular timour antigen p53, B-cell leukenia/lymphoma 2 (bcl.2) prote-oncogene, semaphorin III, HUPF-1, high mobility group protein-C (HMGP-C) and neuroendocrine specific protein A.
                                                                                                                                                                                                                                                 This invention describes a novel method for the diagnosis of a disease caused by, or associated with, an RNA molecule that has a frameshift mutation. The method is used to diagnose age-related diseases, especially cancer and a wide range of neurodegenrative disorders (e.g. Alzheimer's disease, Down's syndrome, myotonic dystrophy, Huntington's disease, and sease, nearlitus type II and many others listed) or susceptibility to these disorders. The method allows a definitive diagnosis of Alzheimer's disease in living patients, at an early stage. It is based on the observation that disease may be caused by mutations in RNA rather than DNA. The invention describes the used of neuronal system RNA molecules, specifically proteins including beta-amyloid precursor protein (beta-APP), the microtubule associated
                                                                                                    Diagnosing disease by detecting frameshift mutations in RNA or corresponding protein mutations - used to diagnose cancer and neurological diseases, particularly Alzheimer's disease, and also for treatment and prevention with specific ribozymes or wild-type

Cyclic peptide which mimics surface feature of endothelin.

OXXXXXXXXXXXX

31-JUL-1998 (first entry)

AAW50857;

AAW50857 standard; peptide; 5 AA.

RESULT 69 AAW50857 Endothelin; endothelina; endothelinb; ETa; ETb; receptor; endothelin-1; cyclic.

Synthetic.

10-JUN-1998,

```
The invention relates to (A) the use of conjugates of the following formula as therapeutic agents: B-Wn, where B = a residue which can bind an endothelin receptor, and is derived from an endothelin partial sequence or an endothelin antagonist; W = an active group which: (i) is a radionuclide or (ii) is derived from a chemotherapeutic agent, a complex with a cardiovacte, a noligonucleotide, a protein tyrosine kinase complex a carbohydrate, an oligonucleotide, a protein tyrosine kinase blocker, an anti-thrombotic agent, a growth factor inhibitor, an anti-thrombotic agent, a growth factor inhibitor, an anti-thrombotic agent, a growth factor inhibitor, an anti-thrombotic agent, a scowth factor inhibitor, an anti-thrombotic agent, a scowth factor inhibitor, an anti-thrombotic agent, a lipid lowering agent or an anti-thrombotic agent, a scowth factor inhibitor, an anti-thrombotic agent, a scowth as a conjugates become enriched in cells in which endothelin receptors conjugates become enriched in cells in which endothelin receptor binding conjugates become enriched sites can be achieved. Unbound conjugate conjugates a specifically craimed endothelin receptor binding conj
                                                                                                                                                                                                                                                                         Therapeutic use, e.g. in treatment of atherosclerosis, of endothelin conjugates - which comprise residue which can bind endothelin receptor, conjugated to groups such as radionuclides or protein tyrosine kinase blockers
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Length 5;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   65.2%; Score 15; DB 19; L ilarity 100.0%; Pred.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ô
                                                                                                                                                                                                                                                                                                                                          The invention relates to cyclic peptides that mimic the surface features of the endothelin peptides. The peptides shown in the invention are pentapeptides, hexapeptides and heptapeptides that contain an L-Trp, D-Trp residue or a derivative of D- or L-Trp, such as N-Me-Trp. The peptides modulate the activity of one or more members of the endothelin family of pepides. They are useful for relieving symptoms of and for treating endothelin mediated disorders and diseases. The present sequence represents a cyclic pentapeptide.
                                                                                  /note= "D-form residue, carboxy group of Trp is
condensed onto the amino group of Glu1 to form
a cyclic peptide"
                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps
                                                                                                                                                                                                                                                                                   New cyclic penta-peptides which are mimics of C-terminus of natural endothelin-1 - useful for relieving symptoms of and for treating endothelin mediated disorders and diseases

The invention relates to cyclic peptides that mimic the surface features of the endothelin peptides. The peptides shown in the invention are pentapptides, hexapeptides and heptiapptides that contain an L-Trp, D-Trp residue or a derivative of D- or L-Trp, such as N-Me-Trp. The peptides modulate the activity of one or more members of the endothelin family of pepides. They are useful for relieving symptoms of and for treating endothelin mediated disorders and diseases. The present sequence represents a cyclic pentapeptide.
                                                                                                                                                                                                "D-form residue, carboxy group of Trp is condensed onto the amino group of Aspl to form

This invention describes a novel aqueous suspension of monodisperse particles on non-crosslinked, non-denatured albumin (50-5000 mm) which is stable against dissolving upon dilution with an alcohol free aqueous medium. The method involves (a) forming an aqueous solution containing albumin and hemoglobin and (b) treating the aqueous solution with an alcohol to cause the solution to become turbid. The particles are useful as agents for in vivo administration, either of their own administration or as a vehicle for other therapeutic or diagnostic agents. The method permits the formation of albumin and hemoglobin particles in the nanometer and micrometer size range, in a form closer to their natural form than the forms of the prior art. The particles therefore constitute a more closely controlled agent for in vivo administration, with greater case of clearance from the body after their period of usefulness.

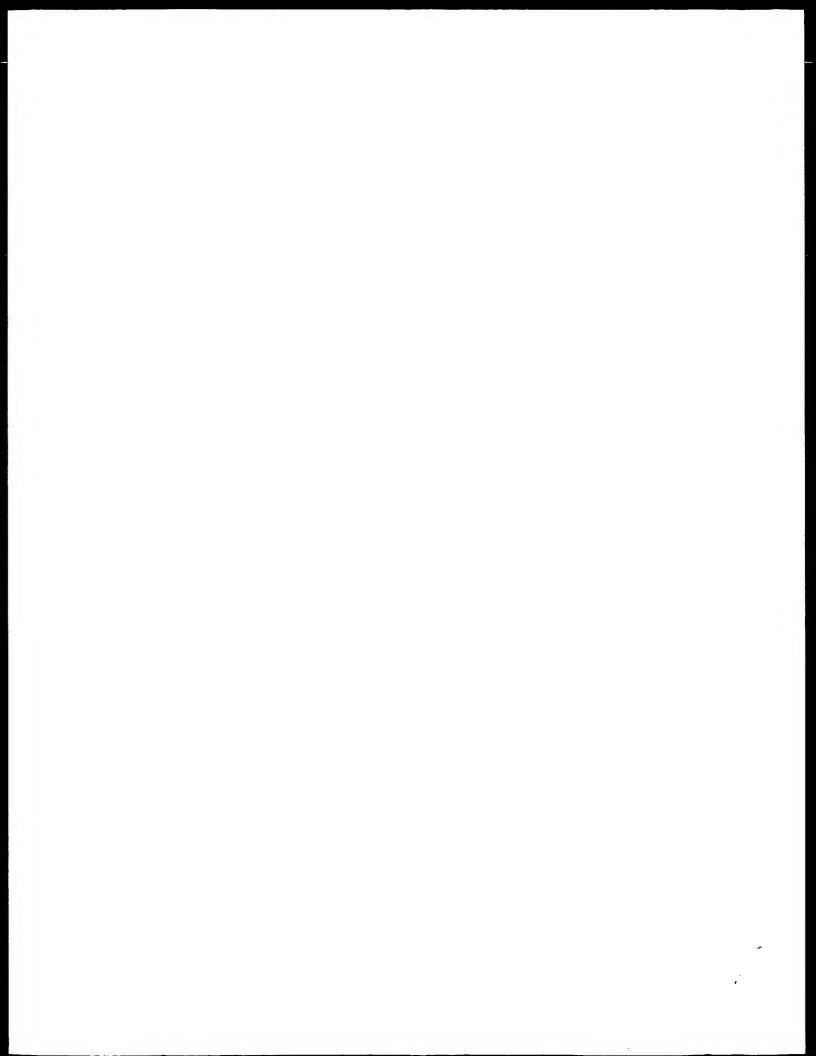

AAY30952-Y31135 represent peptides used in the method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gene characterisation; recombinase; homology clamp; homology motif tag; HMT; genetic manipulation; genetic engineering; gene transcripion; GPCR; drug target; homologous recombination; target identification; TGF-beta; G-protein coupled receptor; transforming growth factor-beta.

The invention provides compositions and methods for the evaluation and characterisation of individual and sets of genes in disease states. The composition comprises at least one recombinase and at least two single-cranded targeting polynucleotides which are substantially complementary to each other and each having a consensus homology clamp for a gene family i.e. a homology motif tag (HMT). The composition is useful in kit form which include the composition as libraries or pools of degenerate cssDNA probes along with other reagents such as recombinase etc. The methods and compositions are used for inactivation of a gene family gene concerns and compositions are used for inactivation of a gene family gene corresponds and compositions are used for inactivation of a gene family gene corresponds and compositions are used for inactivity of one or more genes in a cell control of disease, or in the elucidation of gene function and activity. Alternatively, the biological activity of the wild-type gene carivity. Alternatively, the biological activity of the wild-type gene carivity. Alternatively, the biological activity of the mind-type gene sequences that affect the transcription of genes, including promoter, repressors, enhancers and transcriptional activating sequences. The compositions are useful in functional activating sequences. The compositions are useful in functional activating sequences. The compositions are useful in functional activating sequences. The composition of new drug targets. HMTs used in homologous recombination compositions are useful in functional genemate studies as well as in identification of new drug targets. HMTs used in homologous recombination and callular level to identify genes involved in a cellular level to identify genes involved in a cellular level to identify genes including those related to disease states. This including those related to disease states. This may also be consumed to the proper description of the proper description of the proper description of the proper description
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                phenotypes i.e. target identification. Sequences AAY31248-308 represent consensus peptide motifs of the G-protein coupled receptor (GPCR) gene family and transforming growth factor-beta (TGF-beta) gene family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps
                       New compositions and methods for targeting sequence modifications in related family genes
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Antigenic peptide, streptokinase, streptokinase-specific antibody, thrombolytic activity, thrombolytic therapy, glomerulonephritis,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         .,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                0
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention relates to a monospecific antibody that binds specifically with an epitope defined by the amino acid sequence shown here. The peptide corresponds to a fragment of a trypsin-digested human fibrinogen and is designated fragment B(beta)123-127. The antibody can be used for detecting and measuring enzyme-mediated breakdown of fibrinogen and fibrin. The specific detection of cleavage products of fibrin and fibrinogen permits the accurate and precise determination of thrombotic activity in individuals. The products can be used to study thrombotic development and thrombolysis.
                                                                                                                                                                                                                                                                                        The present sequence represents an antigenic peptide of streptokinase. The specification describes a polypeptide which binds to a streptokinase-specific antibody and prevents the antibody binding to native streptokinase. The specification also describes a synthetic polypeptide (P1) comprising an epitope which binds to an streptokinase-specific antibody and reduces thrombolytic activity of streptokinase. P1 is used in thrombolytic therapy, and to prevent or treat glomerulonephritis and rheumatic fever.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New monospecific antibody to fibrin(ogen) - which can selectively bind matrix metalloproteinase-mediated cleavage fragments of fibrin
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Antibody; epitope; trypsin; human; fibrinogen; detection; enzyme; cleavage; thrombosis; thrombus; thrombolysis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             .

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present sequence is a peptide fragment of T20/DP178. T20/DP178 is a helical segment of the ectodomain of HIV-1 protein gp41. T21/DP178 is located in the carboxyl terminns of the gp41 ectodomain. gp41 plays a critical role in the fusion of HIV-1 and host cell membranes. T20/DP178 interacts with members of the formyl peptide receptor (FPR) family and thereby up-regulates an inflammatory response, and acts as a potent chemoattractant and activator of human peripheral blood phagocytes (but not T cells). The present peptide can be used to modulate an inflammatory response in a subject.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps
                                                                        Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ಡ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          corresponding to

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Sequence 35, Application US/08484409

Patent No. US20020076412A1

GENERAL INFORMATION:

APPLICANT: Steinman, Lawrence
APPLICANT: Zamvil, Scott

TITLE OF INVENTION: METHODS FOR MODULATING THE IMMUNE SYSTEM
NUMBER OF SEQUENCES: 52

CORRESPONDENCE ADDRESS:
ADDRESSEE: SEED and BERRY LLP
STREET: 6300 Columbia Center, 701 Fifth Avenue
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         52.2%; Score 12; DB 10; Length 5; 50.0%; Pred.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Sequence 79, Application US/10014485A

Patent No. US20020168684A1

GENERAL INFORMATION:

APPLICANT: CCMB, Michael J.

APPLICANT: CCMB, Michael J.

APPLICANT: CMB, Michael J.

APPLICANT: CMB, Michael J.

APPLICANT: CMB, Michael J.

APPLICANT: CMB, Michael J.

TITLE OF INVENTION: PRODUCTION OF MOTIF-SPECIFIC AND CONTEXT-INDEPENDENT ANTIBODIES U.

TITLE OF INVENTION: PREPRIED LIBRARIES AS ANTIGENS

TITLE OF INVENTION: PREPRIED LIBRARIES AS ANTIGENS

TITLE OF INVENTION: DATE: 2002-03-18

CURRENT APPLICATION NUMBER: US 09/148,712

PRIOR APPLICATION NUMBER: US 09/148,712

PRIOR PILING DATE: 1998-09-04

PRIOR FILING DATE: 2000-03-24

NUMBER OF SEQ ID NOS: 145

SOFFWARE PATENTIN OF SECOND 3.1
; NAME/KEY: Site
; CCATION: (3)
; CTHER INFORMATION: Xaa equals any of the twenty naturally ocurring L-amino acids
